

e-ISuite Operating System / Browser Tests							
Platform	Operating System	Internet Explorer 8	Internet Explorer 10	Internet Explorer 11	Google Chrome	Firefox	Safari
<b>Windows</b>	Windows XP	X			X	X	
	Windows 7		X	X	X	X	
	Windows 8.1					X	
<b>Macintosh</b>	Mavericks OS X				X	X	X
<b>Linux</b>	Ubuntu 13.04				X	X	

e-ISuite was developed as a browser-based system and is officially supported in a Windows 7 environment using Internet Explorer 11. There is both a cloud-based, web-enabled version called e-ISuite Enterprise, and a local site-based version called e-ISuite Site.

Both versions are browser-based systems. e-ISuite was tested using browsers in various combinations of Operating Systems and Browsers, and while not every function was tested in every browser, the Operating System/Browser combinations above were tested and where an “X” appears, the Operating System / Browser combination appears to work satisfactorily for most, if not all, functions.

Note that the embedded Flash plugin in Internet Explorer 11 and Chrome on Windows 8.1 does not work properly with e-ISuite. Users on Windows 8.1 systems should use Firefox as their browser for e-ISuite (the standard Adobe Flash plugin will need to be downloaded and installed as well for use with Firefox and e-ISuite.)

The Site version of e-ISuite is designed to be installed and used at local sites where internet connectivity is not robust enough to support use of the cloud-based, web-enabled Enterprise version of e-ISuite. The Site version of e-ISuite is designed for installation on systems with Windows operations systems and has been successfully installed on the following operating systems:

- Windows 8.1 Professional
- Windows 7 Professional 64-bit
- Windows XP
- Windows Server 2008
- Windows Server 2012
